Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                               Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Fulloome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.

The invention relates to a soluble polypeptide (I) of beta 2

microglobulin (beta2m)/HFE monochain comprising human beta2m (or its

microglobulin (beta2m)/HFE monochain comprising human beta2m (or its

manalogue or active fragment), linked to alphal-alpha3 domains of human

HFE (a central regulator of iron absorption; undefined), or its analogue

or active fragment, by a flexible linker peptide, or a functional

Gerivative or salt of (I). (I) is useful for reducing intracellular iron

absorption in patients having hereditary haemochromatosis, transfersions,

thalassaemias, haemolytic anaemia or chronic infections, and for

construction are preferably lymphocytes or leukocytes, across the blood-

brain barrier. (I) is further useful for treating brain tumour. (I)

construction of treating oxidative stress disorders resulting in

tissue damage e.g. vascular diseases, inflammation, atherosclerosis,

cutoimmune diseases and inflammatory conditions. The monochain manifests

specific characteriatics advantageous for drug delivery systems. It is a

sutoimmune diseases and inflammatory conditions. The monochain manifests

cutoimmune diseases and inflammatory conditions. The monochain manifests

specific characteriatics advantageous for drug delivery systems. It is a

soluble, stable and fully conformed protein. It binds specifically to

transferriar receptor. If is continuously internalised by the target cells, thus

colls, minimising side effects. It negatively regulates iron absorption,

cells, minimising side effects. It negatively regulates iron absorption,

cells, minimising side effects of newsorp expensed to this receptor in the blood as is transferrin. It should not induce an

collium response since it is a self non-polymeric protein and delivery of

manner response since it is a self non-polymeric protein and delivery of

manner of manner manner manner manner manner is is a

coll manner manner manner manner manner manner is not diluted in the blood as is transferring the protein and delivery of

This cDNA clone, designated cDNA24, is derived from human gene whose mutated form is associated with hereditary haemochromatosis (HH). It was obtained from a directionally cloned plasmaid-based CDNA library following identification of the HH locus in the HLA region of chromosome 6. A single mutation (24d1) in the HH gene ppears responsible for the majority of HH disease. This comprises a G to A substitution that is present in 86% of affected chromosomes and in 4% of unaffected chromosomes. It results in a chromosomes and in 4% of unaffected chromosomes. It results in a chromosomes and in 4% of unaffected chromosomes. It results in a critical disulphide bridge important for secondary structure. The following are claimed: a lose's by genomic DNA sequence (I) (see following are claimed: a lose's by genomic DNA sequence (I) (see following are claimed: a lose's by genomic by and their 24d1, 24d2 and 24d7 variants; a cloning or expression vector; host cells; a peptide product chosen from the HH gene product, its variants (24d1, 24d2 and 24d7), or a peptide of at least 56 amino acid residues of these an antibody produced using the peptide; a method crodermine the presence or absence of the common HH gene mutation; an animal model for the HH disease; metal chelation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 - useful for diagnosis

agents, T-cell differentiation factors and therapeutic agents for the mitigation of injury due to oxidative process in vivo or mitigation of iron overload, a method for screening potential therapeutic agents for activity in connection with HH disease, an antisense oligomorleotide directed against a transcriptional product of a nucleic acid sequence as above, and oligomorleotides or pairs of oligomorleotides covering a range of nucleotides from (I), (Ia) or their variants, useful for detecting a polymorphism in the HH gene. The invention also relates to methods for screening for HH homozygotes, to HH diagnosis, prenatal screening and diagnosis, and therapies of HH disease, including gene therapy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wolff

                                                                                                                                                                                          9
                                                  The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cal differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a human histocompatibility iron loading non-classical class I gene is a major histocompatibility (MHC) non-classical class I gene located chromosome 6p. Mutations in the gene lead to iron disorders. The specification describes a method for diagnosing an iron disorder or a genetic susceptibility to develop the disorder in a mammal. The method comprises determining the presence of a mutation in exon 2 or an intron of a HFE gene or protein. The mutation is not a C to G missense mutation at nucleotide 187 of the sequence given in A96769 (Genbank Accession number 160319). The presence of the mutation indicates the disorder or the genetic susceptibility to the disorder. The method is used to diagnose an iron disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TGTTTGAAGCTTTGGGCTACGTGGATGACCAGCTGTTCGTGTTCTATGATCATGAGAGTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the haemochromatosis (HC) gene. Mutations in this sequence are detected using the method of the invention. The method is for identifying an individual with hereditary haemochromatosis (HH) or a predisposition to develop HH or to genetically pass on HH to an offspring, comprising isolating a biological sample and amplifying a region of genomic DNA in the biological sample encompassing all or part of the DNA between markers D65255 and D65276, and detecting at least one homozygous or heterozygous mutation in a nucleotide within the region. The method can also be used for identifying an individual with an autosomal recessive disorder (ARD) or predisposition to develop and/or genetically pass on an ARD to an offspring, comprises isolating a biological sample from the individual and screening genomic DNA in the sample for the presence of a homozygous or heterozygous mutation in a gene, the normal function of which, is required to prevent progression of the disorder. The method is can be used to identify individuals that are homozygous or heterozygous (carriers) for the mutation causing the ARD. Especially the method is used to diagnose HH or predisposition to HH by detecting a Cys282Tyr substitution. Individuals homozygous for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó

The nucleic acids and proteins are useful for treating colon cancer and colon disorders, and diagnosing or monitoring the presence of colon disorders and metastases of colon cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     colon cancer, and diagnosing or monitoring the presence of metastases of colon cancer in a patient

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 GCCGTGTGGAGCCCCCGAACTCCATGGGTTTCCAGTAGAATTTCAAGCCAGATGTGGCTGC 180
To identify this novel gene, allelic association patterns were determined between known markers and the HH locus in the HLA region of chromosome 6. A physical clone coverage was then generated extending from D6S265, which is a marker that is centromeric of HLA-A, in a telomeric direction through D6S276, a marker at which cate all the allelic association was no longer observed. A single mutation (24d1) in the HH gene appears responsible for the majority of HH disease. This comprises a fto A substitution that is present in C6 4 affected chromosomes and in 44 of unaffected chromosomes. It results in a Cys to Tyr substitution in the encoded protein (see AAW36499) at a critical disulphide bridge important for secondary comparates, a cloning or expression vector; host cells, a structure. The following are claimed: the HH genomic DNA (1), a 1437 bp cDNA sequence (1a) (see AAT96691) and their 24d1, 24d2 and 24d7 variants; a cloning or expression vector; host cells; a comprise of these an antibody produced using the peptide; a method cesiques of these; an antibody produced using the peptide; a method cesiques of these; an antibody produced using the peptide; a method cesiques of these; an antibody produced using the peptide; a method cesiques of these; an antibody produced using the peptide; a method cesiques of the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to connection with HH disease; an antisense oligonucleotide directed against a transcriptional corpuses or pairs of oligonucleotide directed against a transcriptional corpuses or pairs of oligonucleotides covering a range of mucleotides covering and suppositing and therappeutics, and therappeutics, and therappeutics, and therappeutics, and therappeutics, and therappeutics, and therappeutics, and therappeutics, and therappeutics, and therappeuti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TGTTTGAAGCTTTGGGCTACGTGGATGACCAGCTGTTCGTGTTCTATGATCATGAGTC

                                                                                                                                                                                                                                                                   The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cap may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                       Wolff RK;

The HFE gene is a major histocompatibility (MHC) non-classical class I gene located on chromosome 6p. Mutations in the gene lead to iron disorders. The specification describes a method for diagnosing an iron disorder or a genetic susceptibility to develop the disorder in a mammal. The method comprises determining the presence of a mutation in exon 2 or an intron of a HFE gene or protein. The mutation is not a C to G missense mutation at nucleotide 187 of the sequence given in A96769 (Genbank Accession number U60319). The presence of the

The present sequence represents a hereditary haemochromatosis subregion from an individual
mutation indicates the disorder or the genetic susceptibility to the disorder. The method is used to diagnose an iron disorder e.g. haemochromatosis, or a genetic susceptibility to develop it.
                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hereditary haemochromatosis gene products - used to develop products for the diagnosis and treatment of hereditary disorders in iron
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hereditary haemochromatosis subregion from an unaffected individual

unaffected by hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HFP) gene mutation in an individual comprising:

(a) providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of the haplotype or genotype where the presence or absence of the haplotype genotype indicates the likely presence of the HFB gene mutation in the genome of the individual. The HFB gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present including all all and antagonists of BT function. Also described are: (1) a RoRet gene which can be used to develop products for the study, diagnosis and which are homologues of a type I sodium transport gene, and NPT4 genes which are homologues of a type I sodium transport gene, and can similarly be used for hypophosphatemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               43208 AGCTGAGTCAGAGTCTGAAAGGGTGGGATCACATGTTCACTGTTGACTTCTGGACTATTA 43149

products from the human haemochromatosis game. The present sequence represents a hereditary haemochromatosis game. The present sequence represents a hereditary haemochromatosis subregion from an hereditary haemochromatosis (HFB) affected individual. Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HFB) gene mutation in an individual comprising:

(a) providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of a haplotype or genotype where the presence or absence of the haplotype genotype indicates the likely presence of the HFB gene mutation in the genome of the individual. The HFB gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFB. The present invention also describes BTF genes, which are homologues of the milk protein butyrophilin (BT), and can be used in the production of agonists and antagonists of BT function. Also described are: (1) a Roket gene and antagonists of sevence of a syndrome, and (2) NPT3 and NPT4 genes which are homologues of a type 1 sodium transport gene, and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  43338 GTTCACACTCTCTGCACTACCTCTTCATGGGTGCCTCAGAGCAGGACCTTGGTCTTTCCT 43279

```
The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                    New hereditary hemochromatosis gene products or polypeptides, useful for treating hereditary hemochromatosis in a patient, and as a metal chelation agent alleviating iron overload -

                                                                                                                                                                                                                                                                                                                            The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                           264

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 9, Ay Sequence 10, 3 Sequence 1, Ay
